

Try These Challenges

* Take out three coins and put them in a row on the table. The puzzle then is to see if you can remove the middle coin from its central position without touching it with any part of your body or any other object.

* This will tax your ingenuity to the utmost, but the arrangement which forms the solution is a simple and familiar geometric form.

Put ten coins on the table then see if you can arrange them in five lines or rows of four coins each.

* Arrange six coins to form a cross as shown below. Then move one coin and have a cross in which there are four coins in each row, the horizontal and the vertical.
